

Zidan Bakari

Ottawa, ON K2C 1H3

343-961-9813 | baka0038@algonquinlive.com

GitHub: <https://github.com/zidan4b> | LinkedIn: <https://linkedin.com/in/zidan-bakari-44297b307>

PROGRAM-RELATED SKILLS

Programming & Software Development: Java (Object-Oriented Programming, Collections, Unit Testing), Python, JavaScript

Scripting & Automation: Linux Shell scripting (automation of system tasks), scripting for testing and process automation

Operating Systems & Environments: Linux (Ubuntu), Windows 11, Virtual Machines (VMware Workstation)

Development Tools & Version Control: Git / GitHub, Eclipse, NetBeans, Javadoc, JSON

Databases & Data Management: Oracle SQL Developer, SQL Server, SQL Server Management Studio, MySQL, PostgreSQL, MongoDB, Microsoft Access, ODBC

Web & Application Development: HTML, CSS, PHP, JavaScript (building internal tools, web interfaces, and dashboards)

Data Analysis & Reporting: SQL-based data analysis, Microsoft Excel (pivot tables, formulas), Power BI, reporting and process optimization

Learning Focus: Actively building foundational knowledge in cloud platforms, automation frameworks, and cloud-native development concepts.

EDUCATION

Computer Programming Diploma | Expected Graduation: April 2027

[Algonquin College](#), Ottawa, ON

- GPA of 3.37 | Java A- | Database A+

ACADEMIC & PRACTICAL PROJECTS

Fitness Tracker Application | Java | Unit Testing | Oct 2025

Computer Programming

- Developed a Java-based application using object-oriented design to process, validate, and manage application data as part of a larger software system.
- Implemented core application logic in FitnessTracker.java, focusing on correctness, input validation, edge-case handling, and maintainable code structure.
- Designed and executed unit tests using separate test classes (FitnessTrackerTest, FitnessTrackerTest2) to validate functional behavior and support automated testing.
- Investigated, debugged, and resolved defects discovered during testing to improve reliability, consistency, and overall system stability.

Vehicle Management Application | Java | OOP | Unit Testing | Nov 2025 – Dec 2025

Computer Programming

- Designed and implemented a Java application using object-oriented principles, applying inheritance and polymorphism to build modular and extensible components.
- Developed and executed unit and functional test cases to validate application logic and behavior across multiple scenarios, supporting automated testing efforts.
- Investigated, debugged, and resolved defects identified during testing to ensure reliable and consistent behavior across edge cases and configurations.

- Produced clear Javadoc documentation describing classes, methods, and system behavior to support maintainability, testing, and future enhancements.

Database Management Systems (Library & Inventory Solutions) | Sep 2025 – Dec 2025

Database Group Projects

- Designed and implemented relational database solutions for a Library Management System and an Inventory Allocation & Fulfillment System using Oracle and SQL Server to support backend system functionality.
- Developed SQL and PL/SQL logic, including triggers, stored procedures, sequences, and user-defined functions, to automate business rules and enforce data integrity.
- Improved system performance by implementing indexes and analyzing execution plans, reducing full table scans and increasing query efficiency.

Linux User Management Script | Nov 2025 – Dec 2025

Linux Shell Scripting Project

- Designed and implemented a menu-driven Linux shell script to automate user account creation, modification, and deletion using standard system administration commands.
- Applied control structures, functions, input validation, and error handling to ensure reliable script execution and consistent system behavior.
- Utilized system commands (useradd, usermod, userdel, chage, id) and clear documentation to support maintainability and operational reliability.

EventMaster – Event Booking Web Application | Oct 2025 – Nov 2025

Group Project | Web Development

- Developed a PHP-based web application with MySQL to manage event data, user registrations, authentication, and server-side processing.
- Implemented backend validation and database interactions to ensure reliable data flow between application components and the database.
- Collaborated within a team to integrate features, debug issues, and deliver a functional application within project timelines.

WORK EXPERIENCE

IT Support Technician | Aug 2023 – Mar 2024

- Installed and reinstalled Windows operating systems, ensuring proper configuration and data safety.
- Detected and removed malware and system issues to improve performance and basic security.
- Performed data backup and restoration to protect customer files during system servicing.
- Assisted users with software installation, hardware troubleshooting, and basic technical support.

CERTIFICATES

- Java Object-Oriented Programming – LinkedIn Learning | Jan 2026
- Learning Java Collections – LinkedIn Learning | Jan 2026
- SQL for Data Analysis – LinkedIn Learning | Jan 2026
- Git Essential Training – LinkedIn Learning | Jan 2026

VOLUNTEER

ITS Drop-In Booth Volunteer | Jan 2026

- AC Day 1 Volunteer – Algonquin College, Ottawa, ON
